# Now, you too can achieve Perfect Box Joints

Once set up make a sample cut with your saw blade or Router bit, Metric or Imperial, as your iBOX automatically adjusts to both dimensions.

Locate sample cut on pins, then simply turn dial so pins fit snugly in first cut., then proceed to make the cuts on the front and back parts.

**It's almost magic the iBOX dial automatically adjusts the required space and pin width to what ever width of cut you are cutting!**

Locate side part next to a front or back part, clamp side part and proceed to cut the side parts.

And there you have it. A perfect box joint every time.

With Inca's Dual-Pitch lead screw driven positioning engine that controls both the pin width and spacing with a single adjusting knob (to a 25micron tolerance )together with Inca's GLIDE lock mitre bar you too can now achieve PERFECT BOX JOINTS on your table saw or router table saw

**SNEAK PEEK** The INCRA iBOX will include a 62 minute DVD with some exciting new box joint techniques, tips and tricks
